SUMMARY

Self-taught backend developer with 14 months of hands-on experience building production-grade REST APIs. Proficient in Node.js, TypeScript, PostgreSQL, Redis, and Docker. Shipped live projects featuring JWT auth with refresh token rotation, Redis caching, BullMQ async queues, full-stack React frontends, and 80%+ test coverage. Final-year B.Tech student at UVCE Bengaluru (CGPA: 8.08).

SKILLS

Languages: JavaScript, TypeScript, C++, SQL

Backend & Frameworks: Node.js, Express.js, RESTful APIs, JWT (Refresh Token Rotation), BullMQ, RBAC, Middleware

Frontend: React, Vite, useState, useEffect, useRef, React Router, CSS Flexbox/Grid

Databases: PostgreSQL (row-level locking, transactions), Redis (caching, rate limiting, pub/sub), MySQL, MongoDB

Testing & Docs: Jest, Supertest (80%+ coverage), Swagger/OpenAPI, Postman

DevOps & Tools: Docker, Git/GitHub, GitHub Actions (CI/CD), Render, Vercel, Linux

PROJECTS

Job Application Tracker — Full-Stack CRUD Application [Github ↗](#) [Live ↗](#)

React · Vite · Node.js · TypeScript · PostgreSQL · Prisma · Render · Vercel

- Built a full-stack job tracking app with React frontend deployed on Vercel and Express/TypeScript backend on Render
- Implemented complete CRUD — add, view, update, delete applications with real-time state updates and no page reload
- Built modal-based edit flow with prefilled controlled inputs and optimistic state updates using React's useState and map
- Designed status tracking with 6 states (Applied, Interview, Rejected, Ghosted, Offer, Recruiter Screen) with color-coded badges
- Configured CORS, environment variables, and production deployment pipeline across Vercel and Render

SocialBuzz — Social Media Backend API [Github ↗](#)

Node.js · TypeScript · PostgreSQL · Redis · BullMQ · Docker · GitHub Actions

- Built follow system, paginated feed, and user profile endpoints with JWT access & refresh token rotation and HTTP-only cookie handling
- Implemented refresh token family chaining via self-referencing parent_id FK — detects token reuse, revokes all sessions on suspected theft
- Integrated BullMQ with Redis for async fan-out notifications and background email delivery via Resend
- Reduced feed load time from 170ms to 5ms using Redis cache-aside strategy with optimized key design
- Achieved 81% test coverage with Jest and Supertest across 49 test cases; GitHub Actions CI/CD runs tests on every push
- Migrated entire codebase to TypeScript with strict mode, Joi validation, and full type safety across routes and middleware

BankAPI — Secure Banking REST API [Github ↗](#) [Live ↗](#)

Node.js · PostgreSQL · Redis · Docker · Jest

- Implemented JWT refresh token rotation with HTTP-only cookies and reuse detection for secure session management
- Engineered Redis rate limiting via Upstash using Lua scripts and atomic INCR for race-condition-safe throttling
- Applied PostgreSQL row-level locking on transaction records to prevent concurrent balance corruption
- Achieved 70%+ test coverage with Jest and Supertest; deployed on Render with live Swagger/OpenAPI docs

EDUCATION

University Visvesvaraya College of Engineering, Bengaluru | 2022 – 2026

B.Tech Mechanical Engineering | CGPA: 8.08

KLE Society's S. Nijalingappa PU College | 2020 – 2022

PCM | 84%
